

management system, compliance, and due diligence audits

Balanced solutions for minimizing risk

Audits are used to improve your organization's performance for management systems, compliance or due diligence. Our auditors use internationally recognized audit processes to independently gather facts to support continual improvement. We are focused communicators, working with our clients to lead audit teams and provide specialist advice during the audit process.

We also help our clients build internal audit capacity through the delivery of auditor training and customized audit protocols. What sets us apart? Our ability to access leading experts from our team to address site-specific issues in a timely manner. Our auditors draw from our team of more than 2,500 professional specialists located in over 250 offices across North America helping to shape your project with our local understanding.

Our auditors have performed thousands of audits in all Canadian provinces and territories, in over 40 US states, and in many other countries worldwide. We maintain multiple professional auditing certifications and participate on auditing standards writing committees in Canada, the US, and internationally. Grounded by safety, quality, and ethics, we use collaborative solutions that fit our clients' needs.

Stantec's core audit services assist organizations to understand their past and present performance, provide the basis for improvement and communicate actions to meet applicable requirements. Regularly scheduled audits (internal or external) are essential for measuring performance and tracking success of a system.
